Subject: Re: R8 Data Team

Brad,

As we discussed on the phone, somehow the message of my email was garbled by the time it got to the R8 Data Crew.

Let me me absolutely clear and probably a whole lot less diplomatic:

Megan, Jamie and John are the best in the country at what they do. As opposed to the R6 model where all data support is centralized and on the back end, the R8 model is we put our data people on the front line in the field.

I was trying to be nice but I see no instance where if Jamie and Megan ask for a change to be made in the field, that change should not happen. Whatever it takes.

There should be no approval process from other Weston people. That was my message, it is up to you guys to figure out how to adapt and coordinate.

We are all about field Ops in R8 even at the expense of getting data to HQs.

Please respond within 1hr with a proposal as to how you are going to work this out.

> My concern is the change that I have seen in my own R8-based Data Team.

>

> The R8 philosophy is to truly integrate the collection, processing and presentation of data into the field operations. The performance of our team is formally measured by their ability to do this in the form of spot drills and exercises. Dave and Scott will admit to how adamant I have been with this.

>

> Judging by how quickly we started generating data on this response, that it is a very high quality dataset and that my Operations OSCs are totally supported right now; I really like the R8 Data Team of Megan, Jamie and Lucotch.

>

> The change that I have seen is that the R8 Team seems more reserved and less willing to push the envelope / make decisions on their own as to how best to support the OSCs in the field.

>

> My opinion (no one has said a word) is that they are use to an autonomous structure were their primarily role is operations and they are struggling to adapt to a centralized structure that works best for

managing data over a large incident.

>

> Complicated. I have no good answers but honestly R8's dataset is better than the R6 and R9 datasets and the Region 8 Operations OSCs are very happy with their data support. The only thing I can think that will help is if I serve as a gatekeeper between the R8 Team at the R6 crew. Do you have any thoughts? I do not want either groups to stop doing what they do well.
